

Tracking advantage depends on target dynamics and missingness

Training condition: hazard 1/120, 50% missing. Generic RNN - feedback = +0.04386 (crossed 95% CI +0.04247 to +0.04526); output and no-feedback contrasts = +0.0040, +0.0042. 32 training seeds × 256 paired test episodes per condition.
